

# CCRES workshop

ACTRIS / PROBE / E-profile

JC. Dupont, MA. Drouin, F. Toledo, Y. Grit (IPSL)  
L. Pfitzenmaier (U. Köln)

# Spring CCRES / Community Workshop Agenda

**Date:** 26 May 2023

09:00-09:30 Introduction, presentation of ACTRIS organization, presentation of E-PROFILE, state of data in ACTRIS Cloud Remote Sensing Data Center (CLU)

09:30-12:00 Update on ACTRIS / E-profile / PROBE instrument working groups

- ALC Task Group (calibration, optical overlap data format consistency, aerosol profiling) – Simone, Ina
- MWR Task Group (data format consistency, MWRpy implementation, ) - Bernhard
- DL Task Group (data format, user experience, retrievals/scans/No. lidars, ...) - Markus, (Ewan & Maxime Not available)
- DCR Task Group (monitoring with disdro, scanning strategy, ...) – Jean-Charles, Lukas, Felipe.

14:00-17:00.

- Reports from TGs
- Discussion on advanced and multi-instrument products
- CRS NF Labelling: identify which stations are ready to start step 1A
- Scientific highlights
- EarthCare Cal/Val activities

# Generic topics to be discussed in Task Group breakout

- List proposed activities, conducted within ACTRIS, PROBE, E-PROFILE.
  - SOPs – incl. scanning and scheduling requirements
  - Data format (« RAW2L1-like »)
  - Calibration
  - Corrections / pre-processing
  - Quality control (Housekeeping variables, Geophysical variables)
  - Single-instrument products
  - Necessary ancillary data (if any)
- List available resources (repositories for codes, documents, ...)
- Identify contributions towards PROBE / ACTRIS / E-PROFILE deliverables
- List needs for PROBE support grants (in-person visits STSM; virtual mobility grants VMG)
- Calendar of activities
- Identify areas that lack activity
- Propose specific workshops and training

# **Specific** topics to be discussed in DCR Task Group breakout

- List proposed activities, conducted within ACTRIS, PROBE, E-PROFILE.
  - **SOPs – incl. scanning and scheduling requirements**
  - Data format (« RAW2L1-like »)
  - **Absolute calibration**
  - **Monitoring of the DCR calibration**
  - Corrections / pre-processing
  - **Quality control (Housekeeping variables, Geophysical variables)**
  - Single-instrument products
  - Necessary ancillary data (if any)
- List available resources (repositories for codes, documents, ...)
- Identify contributions towards PROBE / ACTRIS / E-PROFILE deliverables
- List needs for PROBE support grants (in-person visits STSM; virtual mobility grants VMG)
- Calendar of activities
- Identify areas that lack activity
- Propose specific workshops and training

# Specific topics to be discussed in DCR Task Group breakout

- Standard Operating Procedures (SOP) : physical set-up and data acquisition
  - Doppler Cloud Radar (DCR, inc. scanning and scheduling requirements)
    - minimum requirement for zenith vertical pointing mode : 50% of the time, maximum gap, minimum duration, Z and DV
    - technical data available
  - Disdrometer (DD)
    - 1min sampling without obstacle
    - technical data available
  - Weather Station station (WS)
    - 1min sampling
    - tipping bucket rain gauge (Can non-tipping bucket rain gauge be qualified?)
    - to be representative of the local environment

=> collocated measurements for DCR/DD/WS

# Specific topics to be discussed in DCR Task Group breakout

- DCR absolute calibration methods
  - Metallic target / mast
  - Calibration Transfer

Uncertainty sources:

- Antennas properties**

  - Beam lobe shape
  - Beam overlap
  - Beam width

- Radar**

Radar gain variations

  - Impact of temperature
  - Non ideal IF filters

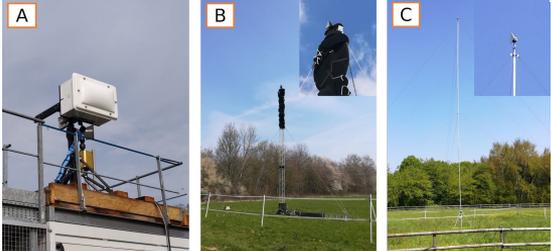

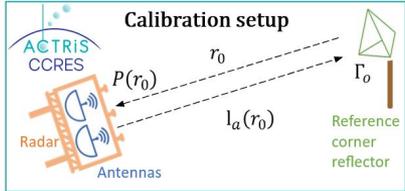

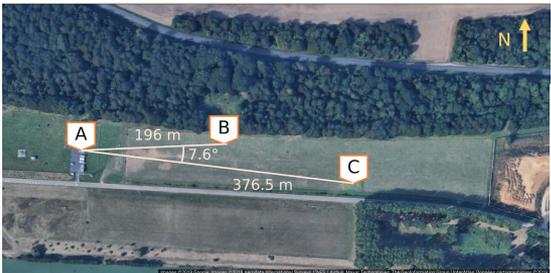

$P(r)$ : Sampled power

  - Receiver compression

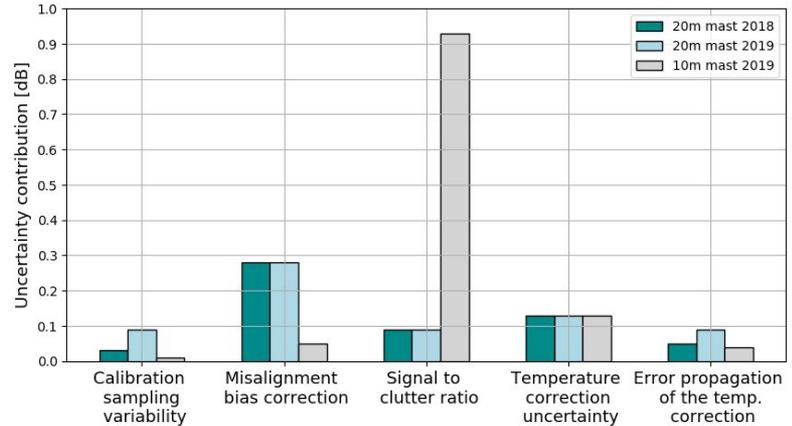

- Reference corner reflector**

$\Gamma_o$ : Reference target Radar Cross Section (RCS)

  - Theoretical value
  - Clutter
  - Alignment

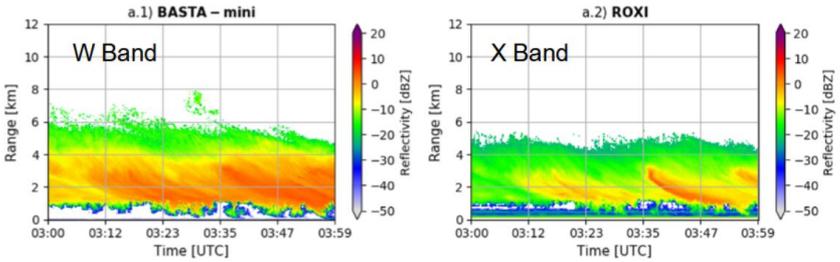

Toledo, F., Delanoë, J., Haefelin, M., Dupont, J. C., Jorquera, S., & Le Gac, C. (2020). Absolute calibration method for frequency-modulated continuous wave (FMCW) cloud radars based on corner reflectors. Atmospheric Measurement Techniques, 13(12), 6853-6875.

# Specific topics to be discussed in DCR Task Group breakout

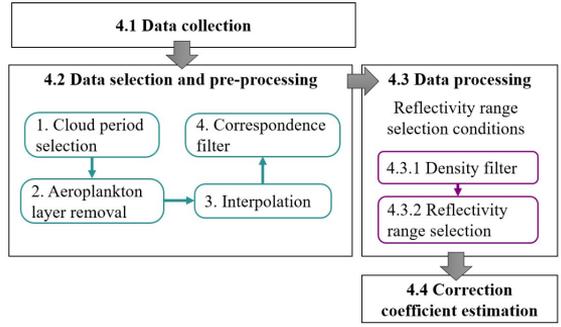

- DCR absolute calibration methods
  - Metallic target / mast
  - Calibration Transfer**

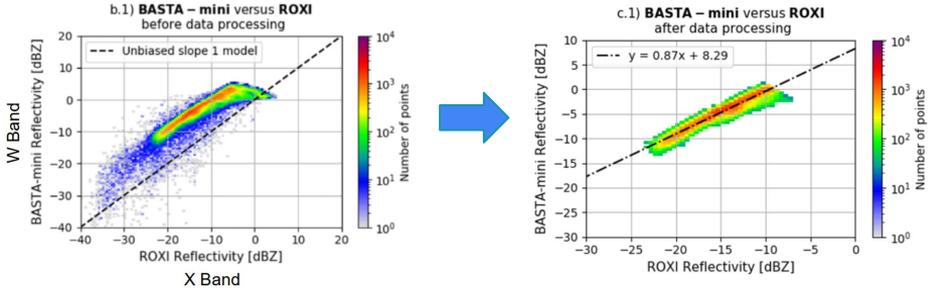

$$Z_r(r) = Z_u(r) + CC$$

Reference radar reflectivity      Uncalibrated radar reflectivity      Radar correction coefficient

Methodology to identify comparable data between different frequency radars

Jorquera, S., Toledo Bittner, F., Delanoë, J., Berne, A., Billault-Roux, A., Schwarzenboeck, A., Dezitter, F., Viltard, N., & Martini, A. (2023). Calibration transfer methodology for cloud radars based on ice cloud observations, Journal of Atmospheric and Oceanic Technology (published online ahead of print 2023). doi: <https://doi.org/10.1175/JTECH-D-22-0087.1>

After data processing is done, a slope-1 fit is used to estimate the CC

# **Specific** topics to be discussed in DCR Task Group breakout

- Perspectives CCRES-FR
  - 2023:
    - Calibration of the CCRES-FR reference radar (BASTA mini)
    - Calibration transfer to the ACTRIS radars from:
      - SIRTA, France
      - JOYCE, Germany
  - 2024:
    - Multifrequency calibration transfer test (10, 35 et 95 GHz)
      - Closure
      - Closure with disdrometers (DSD, Thies, Parsivel)

# **Specific** topics to be discussed in DCR Task Group breakout

- **DCR calibration constant monitoring**
  - Objective
  - Instrumental set-up
  - Pre-processing requirement / CLU-DC status
  - “Good” rain event cases / quality flag
  - Disdrometers comparisons at Joyce
  - SIRTA long-term results

# Specific topics to be discussed in DCR Task Group breakout

- **DCR calibration constant monitoring**

- **Objective** : develop a method to compare reflectivity ( $Z_e$ ) (1) measured by the Doppler Cloud Radar (DCR) with (2) derived from disdrometers to frequently monitor in time shifts, drifts and deviations of the DCR Calibration Constant (CC)
- **Instrumental set-up** : rain gauge, **disdrometers**, **Doppler Cloud radar**

# Specific topics to be discussed in DCR Task Group breakout

- **DCR calibration constant monitoring**

- Pre-processing requirement / CLU-DC status

- Objective : have homogeneous dataset for the ACTRIS sites concerning the input data required for the monitoring.

- Input data :

- weather station variables (T/RH, wind, and **rain rate**)

- ready for SIRTA (1 ascii => 1 netcdf) ✓

- almost ready for Lindenberg (2 ascii => 1 netcdf) ✓

- not ready for JOYCE (pb with time) ✗

- disdrometer variables (**PSD**, fall velocity)

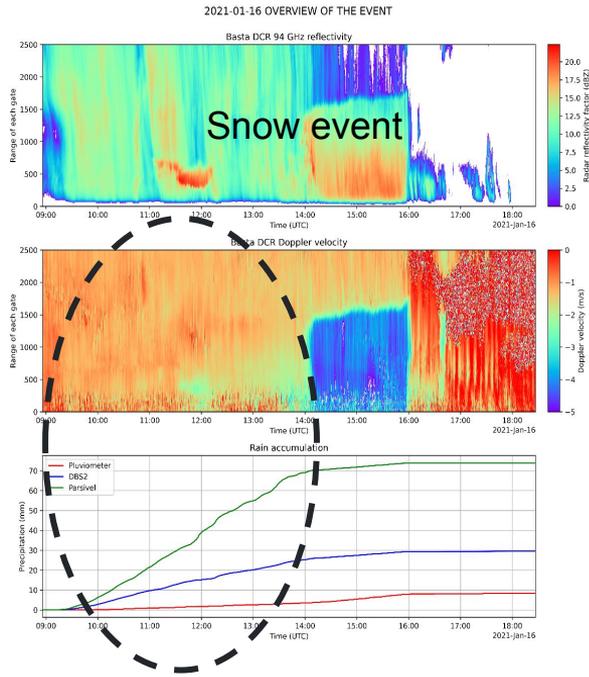

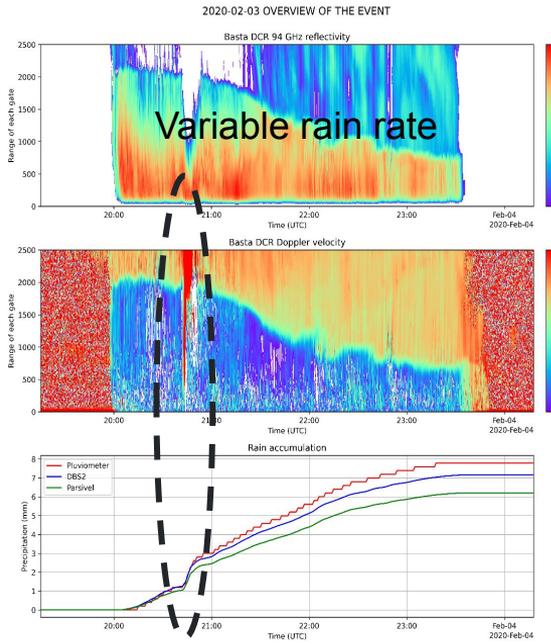

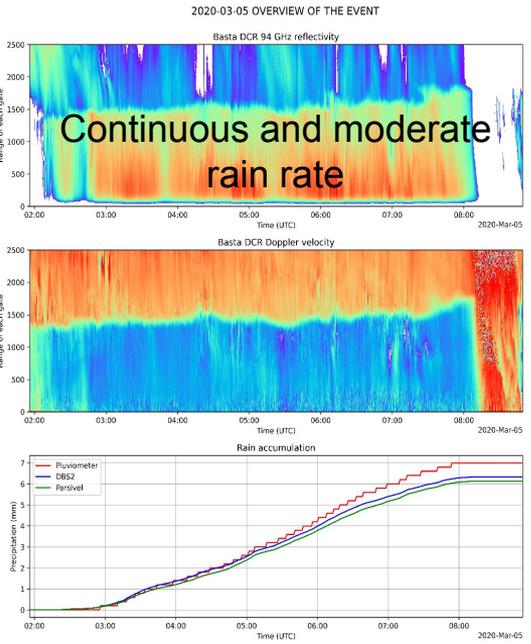

- ready for SIRTA, Lindenberg and JOYCE (1 ascii => 1 netcdf) ✓

- Doppler cloud radar (**Z**, DV)

- ready for all ✓

# Specific topics to be discussed in DCR Task Group breakout

- **DCR calibration constant monitoring**
  - “Good” rain event cases / quality flag
    - => automatic daily figures generated by Yanis python code

# Specific topics to be discussed in DCR Task Group breakout

- DCR calibration constant monitoring**

- => automatic daily/monthly figures available for each NF site
- => generated by python codes installed at CCRES-DC
- => define alert / warning based on DZ value variability

Empirical PDF/CDF of Z differences BASTA / DBS2

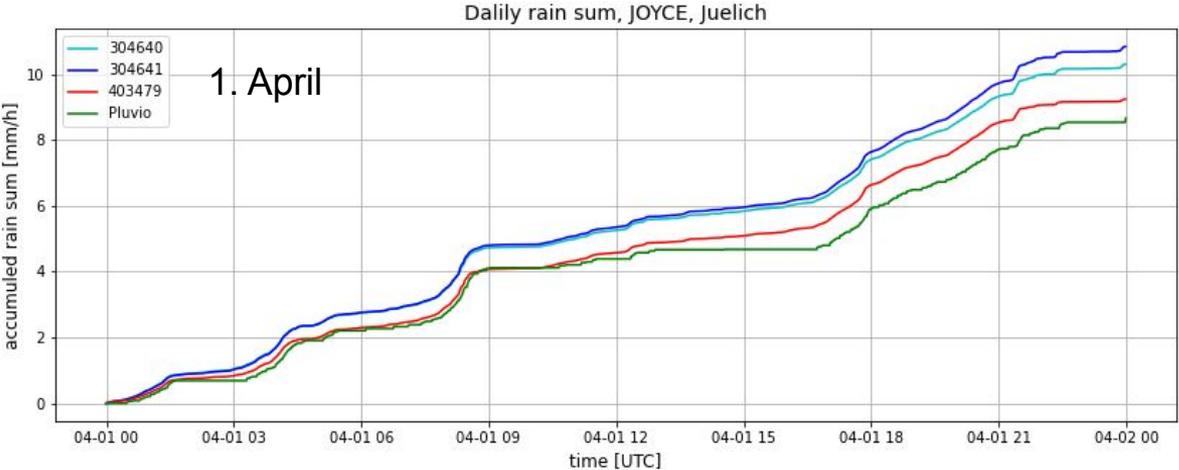

# Specific topics to be discussed in DCR Task Group breakout

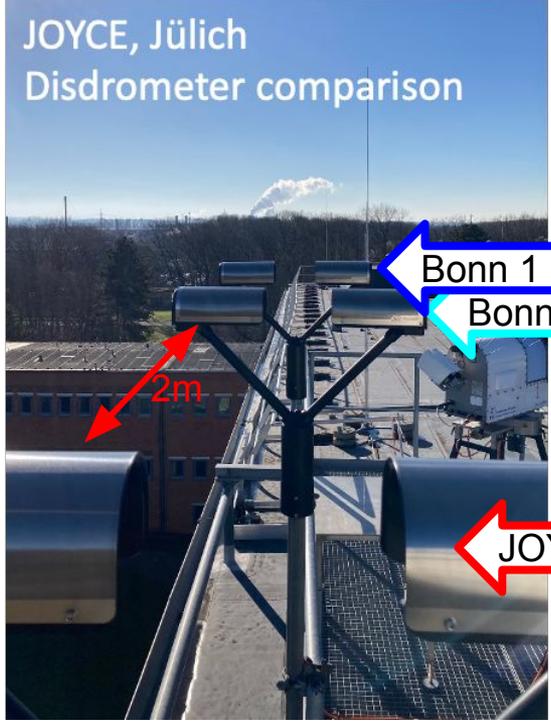

- **DCR calibration constant monitoring**
  - Disdrometers comparisons at Joyce

Comparing 3 Parsivel2 since mid Feb 2023

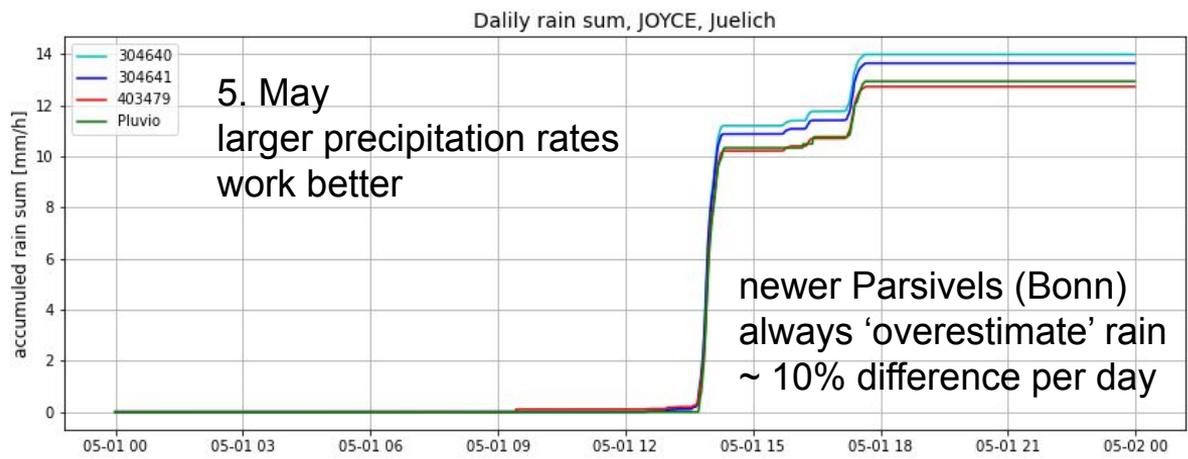

- How good do they match?
- If you know one instrument can you easily replace it with a 'new' one?
- about 2 month data

# **Specific** topics to be discussed in DCR Task Group breakout

- HouseKeeping Data (HKD) definition (DCR).

<b>Radar</b>	<b>Assignee(s)</b>	<b>status</b>
LATMOS Basta	J.-C. Dupont & F. Toledo	<b>Done</b>
METEK MIRA 35(-s)	J.-C. Dupont & F. Toledo	<b>Todo</b>
RPG FMCW 94 (DP)	J.-C. Dupont & F. Toledo	<b>Ongoing</b>

- RPG FMCW 94
  - HKD variables identified, alerts triggers to be completed
- Metek MIRA
  - Meeting with METEK (M. Bauer-Pfundstein)
  - Software dedicated to extract HKD for ACTRIS-CCRES will be developed by METEK
  - 2 pilot stations have a MIRA (JOYCE and Lindenberg)

# **Specific** topics to be discussed in DCR Task Group breakout

- HouseKeeping Data (HKD) definition (DD)

<b>Instruments</b>	<b>Assignee(s)</b>	<b>status</b>
OTT parsivel 2	J.-C. Dupont & L. Pfitzenmaier	<b>Done</b>
Thies LNM	J.-C. Dupont	<b>Done</b>

- HouseKeeping Data (HKD) definition (WS)
  - Low priority
  - Most instruments don't have HKD
  - Perhaps later: monitoring of some rain gauge

# **Specific** topics to be discussed in DCR Task Group breakout

- HKD code/flux
  - All codes to extract HKD from DCR and DD data need to be developed
  - RPG FMCW and basta use netCDF files.
    - Shouldn't be too complicated
  - METEK MIRA should also have HKD in netCDF file

# Specific topics to be discussed in DCR Task Group breakout

- Example monitoring for basta in SIRT

# **Specific** topics to be discussed in DCR Task Group breakout

- Geophysical data quality control
  - ...
- Does the task group need support from
  - PROBE : virtual mobility grant to write a report, short term scientific missing any country in EU
  - ATMO ACCESS : Transnational access project to SIRTA
- Will the group propose training ? What , when ?

# DCR Breakout session summary

- SOPs : Scanning radars
  - There is a need to define strict minimum requirements on vertical observations (model comparisons)
    - Frequency
    - Time coverage -> discuss within CLU to define minimum requirements of CloudNet
    - Discuss within CCRES after the meeting with CLU
  - Discuss common scanning strategies to harmonize standardized scans
    - Product development
    - Example: Wind profiles
    - How to fit into CLU, vertical observations considered
    - Install scan for wind retrievals at Rado (Standard scan strategy for Mira)
  - Discussed common scans windows with other scanning instrument grounds (MWR, Doppler Lidar) -> Broader discussion needed!
  - Experimental scans could be done outside the allocated time periods for vertical profiling and standard scans - new file name convention?
- Outcome:
  - Updated SOPs
  - Standard scans for Wind retrieval

# DCR Breakout session summary

- Radar calibration, perspectives:
  - 2023:
    - Calibration of the CCRES-FR reference radar (BASTA mini)
    - Calibration transfer to the ACTRIS radars from:
      - SIRTA, France
      - JOYCE, Germany
  - 2024:
    - Multifrequency calibration transfer test at SIRTA (10, 35 et 95 GHz)
      - Closure
      - Closure with disdrometers (DSD, Thies, Parsivel)
    - Possible calibration transfer campaigns at:
      - INOE, Bucarest (Ka and W)
      - LMU, Munich (X, Ka, and W)
      - TROPOS, Leipzig (2 Ka and 3 W)

# DCR Breakout session summary

- Calibration monitoring
  - Tracking works for SIRTA
    - Tested with the Parsivel disdrometer
    - **Users request: Ze-monitoring code to test with their own data sets - release a version v0? - online training of the SIRTA/CCRES tool - release the tool for others to play around. Make a plan to get here.**
  - Disdrometer comparison at JOYCE :
    - Investigate more time into Disdrometer calibration or validation of their data - uncertainty estimation
  - Weather station requirements
    - Discussion on the time resolution requirements, a sensitivity study is needed
    - Rain gauge needed to cross check the disdrometer data quality (1 min sampling time)
    - We'll begin by defining beta requirements, to be improved with experiments using the calibration tracking tool
  - Think about shorter time scales for the calibration monitoring (“real time monitoring”)

# DCR Breakout session summary

- Housekeeping
  - The software platform is ready and tested, variable definition is still missing for some instruments
  - MIRA radars require a HKD data output -> [discuss within JOYCE and Metek](#)
  - Use a similar framework for the calibration tracking?
